

LANCO Solar International, a global brand specialising in the innovation and expansion of the solar energy market, has been working with Sixt for the past 10 months in the UK to provide spot vehicle hire for their staff.

Marie Akashi,
Human & Resources – LANCO Solar International

How Sixt helps us

“We have been working with Sixt UK ever since we established our London office back in March 2011 when their services were recommended to us through our global office network which utilises Sixt across our world locations. Deciding to work with them was an easy decision for us as we were impressed by their international reach yet local feel and knew from our colleagues in other markets that they offer a reliable service.

“Despite being part of a global network, we are a newly registered company in the UK which prevents us from securing any long-term leases for vehicles at this point in time. Therefore, we approached Sixt to assist us with the spot hire of vehicles as and when we require them for our developers, which is something they have been able to help us with easily over the past 10 months. This often equates to between 5 – 10 vehicles at any time and the flexibility

of the service allows us to arrange hire quickly, efficiently and without any hassle. In addition, we can always rely on being provided with a high quality vehicle, regardless of how late we arrange the booking.

“As a business working to improve the environment around us, ensuring that we cut down on our energy usage is a big concern for us. Working with Sixt we know that we are using the most efficient vehicles possible when it comes to carbon emissions, as the majority of the rental vehicles are below 120g Co2/km and have a fuel consumption of 30 mpg or better.

“Working with Sixt really helps me in terms of managing the vehicles for our employees and takes the headache away from this part of my role. Knowing that all the cars have been safety checked to the highest standard

removes any worries concerning employee duty of care issues and the efficient fuel card system means I can easily reconcile fuel budgets through our business account with the car hire provider.”
